- Using P5.js library to implement the visualization in the visualization page.
    - P5.js will not be used for implementation for the visualization page because it doesn't play along with React. So, we decided to use plain JavaScript instead.

- Download button in the visualization page.
    - The download button would use the P5.js library so, we need to find another way to download the visualization. Otherwise, we will not implement a download button.
